

# Oil & Gas Quality Management Auditing Procedures

**Duration:** 5 Days

**Language:** en

**Course Code:** IND01-109

## Objective

Upon completion of this course, participants will be able to:

- Develop a deeper understanding of ISO guidelines for gas and oil discovery, distribution, and sales.
- Plan and execute audits of your business practices to work towards continuous improvement.
- Assess risks and develop plans to mitigate future issues.
- Create contingency plans for failures to ensure the stability of a safe working environment.
- Develop forecasting models to future-proof your organisation.
- Understand the implications of non-adherence to ISO standards for the safety of your employees, customers, and the wider environment.
- Make strategic plans for company improvement from audit results to improve profitability.

## Audience

This course is great for anyone within a management or change and control position within the energy and fuel industry who wishes to tighten their processes to meet ISO standards and create wider profit margins. However, it would be most beneficial for:

- Senior Managers
- Operations Managers
- Quality Assurance Officers
- Health & Safety Personnel
- Risk Assessors
- Purchasing Managers
- Change & Control Managers

## Training Methodology

This course uses various adult learning techniques, including trainer-led seminars on the importance of quality standards, practical exercises in the form of group discussions, and planning trees to understand how individual organisations could benefit from innovative change and regular audits.

Each participant will leave with a greater knowledge of planning procedural change and an understanding of the auditing process to aid internal risk assessments and operational performance reviews.

## Summary

Quality standards within energy companies and their oil and gas discovery processes are paramount for energy-efficient, more environmentally friendly, and safe sales. For this reason, it's important to understand how to accurately audit and risk assess your own organisation and benchmark against industry standards to ensure you are maintaining standards and making the right strategic decisions to move forward.

Working within an oil or gas provision company requires you to gain essential knowledge regarding the ISO standards on quality, environmental maintenance, and occupational health and safety to ensure you are meeting your legal responsibilities and appropriate management safety standards to maintain a quality service.

It's important to understand how to audit and evaluate your own organisation to make changes that work towards continuous improvement and increased productivity. This ensures employee safety and environmentally focused practices and lays the groundwork for process reviews to develop a company's opportunity to make more profit.

# Course Content & Outline

## Section 1: Quality Management Auditing

- Audit planning and understanding ISO 9001, ISO 14001, and ISO 45001.
- Your biggest business risk areas.
