

Planning for Continuous Process Improvement

Duration: 5 Days

Language: en

Course Code: MG2-112

Objective

Upon completion of this course, participants will be able to:

- Become familiar with project planning and recognise where change is required.
- Assess potential risks and learn to mitigate them to achieve positive results.
- Identify new and trending customer demands and build a framework to exceed expectations.
- Understand the role of leadership when developing continuous improvement strategies.
- Develop your key performance indicators and long-term business goals around continuous improvement processes.
- Understand Six Sigma and Lean development models to aid continuous improvement practices.

- Communicate the reasons and requirements for continuous improvement to customers and employees to ensure smooth development.
- Accurately record and monitor the result of improvement processes to determine the best way forward.

Audience

This course was created for people who are responsible for making process changes or leading projects to improve business performance and drive profits. It would be particularly beneficial for:

- Project Planners
- Finance Managers
- HR Personnel
- Directors
- Business Owners
- Operations Managers
- Change & Control Managers
- Planning Managers
- Data Analysts
- Team Leaders

Training Methodology

This course uses a range of adult learning methods, including trainer-led seminars to discuss the current marketing and financial climate, practical journey mapping exercises to determine the areas that require innovation and real-life case studies encased in discussion groups to help put the theory into a practical situation.

You will discover planning methods to streamline your processes and develop effective communication styles through role-playing to ensure you gain customer and employee buy-in. This course uses a range of adult learning methods, including trainer-led seminars to discuss the current marketing and financial climate, practical journey mapping exercises to determine the areas that require innovation and real-life case studies encased in discussion groups to help put the theory into a practical situation.

You will discover planning methods to streamline your processes and develop effective communication styles through role-playing to ensure you gain customer and employee buy-in.

Summary

It's too easy to remain in the safe zone with your business. You know what works and what doesn't; sometimes, taking a risk is difficult, even if you think it may pay off. However, if you remain static, your processes and systems will become outdated, which may mean you fall behind the competition. It's essential that you use innovative ideas and up-to-date process models to improve your organisation's procedures continuously. Continuous improvement means that you will meet the demands of your clients and customers and will be seen as a more viable option for stakeholder investment. Being proactive about your goals and using clear communication will help you gain buy-in from your workforce, lower attrition, and keep your customer base interested in your next big step to increase your profit margins. Continuous improvement means understanding the bigger picture and excelling in risk management to mitigate service failures, move towards streamlining processes, and generate more profit while maintaining excellent service.

Course Content & Outline

Section 1: Why Innovation Is Important

- Understanding the principles of innovation.
- Why the status quo is bad for business.
- Understanding the need for change.
- The power of brainstorming issues.
