

# Oil & Gas Financial Modelling

**Duration:** 5 Days

**Language:** en

**Course Code:** IND01-123

## Objective

Upon completion of this course, participants will be able to:

- Develop a structured quantitative analysis of your current financial position.
- Assess the most relevant tools and systems to help make sound financial decisions.
- Apply financial modelling to the energy sector.
- Create advanced financial models that take risks into account.
- Accurately assess the potential risks of each decision.
- Create investment models and work with beneficial partner organisations.
- Negotiate positive deals with investors and partners.
- Use business statistics to improve your overall operation.
- Apply appraisal techniques to your financial plan and open up discounted rate opportunities.

## Audience

This course is designed for anyone responsible for making large financial decisions within the

gas and oil industry. It would be most beneficial for:

- Chief Financial Officers
- Business Owners
- Data Analysts
- Investment Bankers
- Risk Assessors
- Corporate Finance Managers
- Business Application Writers
- Account Managers
- Asset Managers
- IT Professionals

## Training Methodology

This course uses a variety of adult learning techniques to aid full understanding and comprehension. Participants will be presented with the key tools to help them make financial decisions. They will view real-world examples of financial planning models and work together to understand which systems would work for their organisation.

They will work in groups to develop a mock financial plan based on key data and assess the risk areas in moving forward, developing mitigation methods along the way. Finally, the participants will take part in an interactive seminar to understand the key differences in financial planning models when related specifically to the oil and gas industry.

## Summary

The oil and gas industry is a large, global player and to maintain a competitive edge, it's important to understand the structures and development involved in financial modelling.

Finance professionals in the oil and gas sector will need to utilise core concepts and monitor the market's progress and productivity to make sound financial decisions. Analysing key data sets and making comparisons with competitor organisations is key to designing accurate financial models that take current data and trends into account while forecasting for the future.

Strict risk assessments should also accompany your future predictions and assumptions to make comprehensive decisions on the most sensible financial plan, which avoids the

potential for downturns and profit losses.

In this hugely competitive industry you will need to select and develop the appropriate statements and systems to support your financial schedules and create a professional financial model fit to withstand the future in the high-performing energy sector.

## Course Content & Outline

### Section 1: Financial Management Systems & Their Uses

- What a financial model means to you.
- Effective budget monitoring and preparation.
- Cash flow recording.
- Management and forecasting for the future.
- Interpreting your data.
