Audience

This course is intended for

- Business Managers
- Business/Business Process Analysts
- Process Owners
- Business and Systems Analysts
- Information Technology Professionals
- BPM Project Leaders
- BPM Project Team Members and Quality Specialists
- Project managers
- Functional Manager
- Developers and Testers
- Systems Analysts

Training Methodology

Teaching takes place in a variety of settings, including face to face in a classroom

environment. It will ensure that participants can expand their knowledge of the subject and increase their skill set. The course is delivered via various methods by a specialist tutor. This will include PowerPoint presentations, reviewing articles and other relevant materials, group or individual exercises and discussions. There may be some independent work set, and the course will require submitting articles to demonstrate understanding and an end-of-course test. Note-taking is encouraged, and you are welcome to use electronic devices to do this.

The course manual will form part of the learning but give you references for the future. You are encouraged to ask questions and, if needed, spend time one-on-one with your tutor to review any issues. You can network with peers in similar roles during your time in the classroom.

Summary

Business analysis is a vital component for any organisation and is required for many activities such as Business Process Redesign and many improvement programmes. It comes into play in system development, reengineering, continuous process improvement and quality management. To work effectively as a business analyst, you must have analytical skills and understand how to model business processes. This knowledge needs to extend from the overview enterprise level down to a workflow level documented in detail.

The course will help delegates understand what is needed to map the business process models and break down the steps required to ensure that the business model accurately reflects the process. It will look at the stakeholders' requirements and the company's operational level. Good business analysts can improve the business's competitiveness, increase efficiency, and help reduce costs while increasing the satisfaction of employees and customers.

One critical skill is understanding the widely used Business Process Modelling Notation (BPMN) tool. It is business-friendly yet able to bring precision to any aspect of implementing and automating business processes. Once demonstrated, it is easy to work with and should be a role staple. The course will look at all best practices and show how business analysts can prepare and manage and successfully implement business process solutions.

Course Content & Outline

Section 1: Business Analysis 101

- An Introduction to Business Processes
- Types of business processes
- Identifying and naming business processes
- Business analysis v project management
