

# Smart Cities: Planning & Development

**Duration:** 5 Days

**Language:** en

**Course Code:** IND04 - 125

## Objective

Upon completion of this course, participants will be able to:

- Understand smart city concepts and principles.
- Develop strategies for smart infrastructure.
- Enhance urban mobility and energy systems.
- Implement IoT and big data solutions.
- Foster public sector innovation and citizen engagement.

## Audience

This course is intended for

- Urban planners and designers
- Government officials and policymakers
- Technology and innovation professionals
- Environmental and sustainability consultants
- Project managers in urban development

## Training Methodology

This course uses a variety of adult learning styles to aid full understanding and comprehension. Including:

- Interactive lectures and discussions
- Real-world case studies
- Group projects and collaborative exercises
- Practical workshops on smart city tools

## Summary

As cities evolve to meet the demands of growing populations and environmental challenges, the concept of smart cities has emerged as a transformative solution for creating urban environments that are efficient, sustainable, and liveable. This course provides a comprehensive exploration of the design and development of smart cities, focusing on the integration of cutting-edge technologies, sustainable practices, and innovative solutions to address modern urban challenges.

Participants will gain a deep understanding of the principles that underpin smart urban infrastructure, including the strategic use of the Internet of Things (IoT), big data analytics, and advanced communication systems to enhance city functionality and citizen engagement. The course highlights the importance of public sector innovation, collaboration, and policy frameworks in driving the success of smart city initiatives.

Through a dynamic blend of interactive lectures, case studies of successful smart city projects, and hands-on workshops, participants will develop the skills and knowledge needed to contribute to planning and executing smart city projects. Key topics include energy-efficient infrastructure, intelligent transportation systems, smart governance, and the use of

data-driven insights for decision-making.

Whether you are a city planner, technology innovator, policy advisor, or sustainability professional, this course equips you with the tools to shape the future of urban living. Join us to discover how to design cities that balance technological advancement with environmental stewardship, creating vibrant, resilient communities for generations to come.

## Course Content & Outline

### Section 1: Introduction to Smart Cities

- Definitions and key concepts
- Drivers of smart city development
- Case studies of global smart cities

### Section 2: Smart Urban Infrastructure

- Principles of smart urban design
- Integrating technology with infrastructure
- Managing transitions from legacy systems

### Section 3: Public Sector Innovation

- Role of government in smart city development
- E-government and digital governance
- Innovation strategies for the public sector

### Section 4: IoT and Big Data in Smart Cities

- Overview of IoT applications
- Big data analytics for urban management
- Privacy and security considerations

### Section 5: Smart Mobility and Energy Systems

- Smart transportation solutions
- Sustainable urban energy systems
- Case studies on mobility and energy innovations

### Section 6: Citizen Engagement and Smart Living

- Enhancing quality of life through technology

- Citizen-centric smart city initiatives
- Measuring and improving citizen satisfaction

## Certificate Description

Upon successful completion of this training course, delegates will be awarded a Holistique Training Certificate of Completion. For those who attend and complete the online training course, a Holistique Training e-Certificate will be provided.

Holistique Training Certificates are accredited by the British Assessment Council (BAC) and The CPD Certification Service (CPD), and are certified under ISO 9001, ISO 21001, and ISO 29993 standards.

CPD credits for this course are granted by our Certificates and will be reflected on the Holistique Training Certificate of Completion. In accordance with the standards of The CPD Certification Service, one CPD credit is awarded per hour of course attendance. A maximum of 50 CPD credits can be claimed for any single course we currently offer.
